Introduction

The **Garage Management System** is a Salesforce-based project that helps a vehicle garage manage its daily work like customer records, appointments, service details, billing, and feedback. Instead of doing everything manually, this system stores all data in one place, automates tasks, and makes garage operations faster and more accurate. It also provides reports and dashboards for managers to check performance and customer satisfaction.

What You Will Learn

- How to create a Salesforce Developer Org.
- Building **custom objects & fields** (Customer, Appointment, Service, Billing).
- Linking data using **relationships**.
- Using **profiles, roles, and sharing rules** for security.
- Automating tasks with **Flows and Apex triggers**.
- Creating **reports and dashboards** for analysis.
- Applying Salesforce CRM to a real-world industry case.

Creating Developer Account:

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Sign up for your Salesforce Developer Edition
A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

First Name*
Your first name

Last Name*
Your last name

Email*
Your email address

Role*
Your job role

Company*
Company Name

1. First name & Last name
2. Email
3. Role : Developer
4. Company : College Name
5. County : India
6. Postal Code : pin code
7. Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in the format : `username@organization.com`

Click on sign me up after filling these.

Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

2. Click on Verify Account
3. Give a password and answer a security question and click on change password.

A screenshot of the 'Change Your Password' form. The form has a title 'Change Your Password'. Below the title, it says 'Enter a new password for lead@sb.oom. Make sure to include at least:'. There are three green checkmarks indicating requirements: '8 characters', '1 letter', and '1 number'. The form contains four main sections: 'New Password' with a text input field and a 'Good' status indicator; 'Confirm New Password' with a text input field and a 'Match' status indicator; 'Security Question' with a dropdown menu showing 'In what city were you born?'; and 'Answer' with a text input field containing 'asdfghjkl'. At the bottom of the form is a blue 'Change Password' button. A red rectangular border highlights the 'New Password', 'Confirm New Password', 'Security Question', 'Answer', and 'Change Password' sections.

4. Then you will redirect to your salesforce setup page.

Create Customer DetailsObject

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
1. Enter the label name >> Customer Details
2. Plural label name >> Customer Details
3. Enter Record Name Label and Format
 - Record Name >> Customer Name
 - Data Type >> Text
2. Click on Allow reports and Track Field History,
3. Allow search >> Save.

Create Appointment Object

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
1. Enter the label name >> Appointment
2. Plural label name >> Appointments
3. Enter Record Name Label and Format
 - Record Name >> Appointment Name
 - Data Type >> Auto Number
 - Display Format >> app-{000}
 - Starting number >> 1
2. Click on Allow reports and Track Field History,
3. Allow search >> Save.

Create Service records Object

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
1. Enter the label name >> Service records
2. Plural label name >> Service records
3. Enter Record Name Label and Format
 - Record Name >>Service records Name
 - Data Type >> Auto Number
 - Display Format >> ser-{000}
 - Starting number >> 1
2. Click on Allow reports and Track Field History,
3. Allow search >> Save.

Create Billing details and feedback Object

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
1. Enter the label name >> Billing details and feedback
2. Plural label name >> Billing details and feedback
3. Enter Record Name Label and Format
 - Record Name >> Billing details and feedback Name
 - Data Type >> Auto Number
 - Display Format >> bill-{000}
 - Starting number >> 1
2. Click on Allow reports and Track Field History,
3. Allow search >> Save.

Creating a Custom Tab

To create a Tab:(Customer Details)

1. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)

2. Select Object(Customer Details) >> Select the tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) uncheck the include tab .
3. Make sure that the Append tab to users' existing personal customizations is checked.
4. Click save.

New Custom Object Tab

[Help for this Page](#)

Step 1. Enter the Details

Step 1 of 3

Choose the custom object for this new custom tab. Fill in other details.

Select an existing custom object or [create a new custom object now](#)

Object

Tab Style

(Optional) Choose a Home Page Custom Link to show as a splash page the first time your users click on this tab.

Splash Page Custom Link

Enter a short description.

☒ Append tab to users' existing personal customizations 

Previous Save Cancel

Creating Remaining Tabs

1. Now create the Tabs for the remaining Objects, they are “ Appointments, Service records,Billing details and feedback”.
2. Follow the same steps as mentioned in Activity -1 .

Create a Lightning App

To create a lightning app page:

1. Go to setup page >> search “app manager” in quick find >> select “app manager” >> click on New lightning App.

2. Fill the app name in app details as Garage Management Application >> Next >> (App option page) keep it as default >> Next >> (Utility Items) keep it as default >> Next.

3. To Add Navigation Items:

4. Select the items (Customer Details,Appointments, Service records, Billing details and feedback, Reports and Dashboards) from the search bar and move it using the arrow button >> Next.

5. To Add User Profiles:

Search profiles (System administrator) in the search bar >> click on the arrow button >> save & finish.

Creation of fields for the Customer Details object

1. To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Customer Details) in search bar >> click on the object.

Object Manager					
2 items, Sorted by Label					
LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Customer	Customer	Standard Object			
Customer Details	Customer_Details__c	Custom Object		05/10/2023	✓

2. Now click on “Fields & Relationships” >> New

The screenshot shows the Salesforce Object Manager interface for the 'Customer1' object. The 'Fields & Relationships' tab is selected in the left sidebar. The 'New' button is highlighted in the top right corner of the 'Fields & Relationships' section. The table below lists the fields for the 'Customer1' object.

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
current Status	current_Status__c	Picklist		
Customer Name	Name	Text(80)		✓
Email Id	Email_id__c	Email (Unique)		✓
Last Modified By	LastModifiedById	Lookup(User)		
Owner	OwnerId	Lookup(User,Group)		✓
Permanent Address	Permanent_Address__c	Text Area(255)		
Phone no	Phone_no__c	Phone		

3. Select Data Type as a “Phone”

The screenshot shows the 'Phone no' field in the 'Fields & Relationships' section. The 'Phone' data type is selected from the list of available data types. The description for the 'Phone' data type is highlighted.

Phone
Allows users to enter any phone number. Automatically formats it as a phone number.

4. Click on next.

5. Fill the Above as following:

- Field Label: Phone number
- Field Name : gets auto generated
- Click on Next >> Next >> Save and new.

Note: Follow the above steps for the remaining field for the same object.

2. To create another fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Customer Details) in search bar >> click on the object.
2. Now click on “Fields & Relationships” >> New
3. Select Data type as a “Email” and Click on Next
4. Fill the Above as following:
 - Field Label : Gmail
 - Field Name : gets auto generated
 - Click on Next >> Next >> Save and new.

Creation of Lookup Fields

Creation of Lookup Field on Appointment Object :

1. Go to setup >> click on Object Manager >> type object name(Appointment) in the search bar >> click on the object.

2. Now click on “Fields & Relationships” >> New

3. Select “Look-up relationship” as data type and click Next.

4. Select the related object “Customer Details” and click next.
5. Next >> Next >> Save.

Note: Make sure you complete Activity 4 Before continuing.

Creation of Lookup Field on Service records Object :

1. Go to setup >> click on Object Manager >> type object name(Service records) in search bar >> click on the object.
2. Now click on “Fields & Relationships” >> New
3. Select “Look-up relationship” as data type and click Next.
4. Select the related object “ Appointment ” and click next.
5. Make it a required field so click on Required.

6. Scroll down for Lookup Filter and click on Show filter settings.
7. Now add the filter criteria.
8. Field : Appointment: Appointment Date >> Operator : less than >> select field >> Appointment: Created Date
9. Filter type should be Required.

10. Error Message : Value does not match the criteria.
11. Enable the filter by click on Active.
12. Next >> Next >> Save.

Creation of Lookup Field on Billing details and feedback Object :

1. Go to setup >> click on Object Manager >> type object name(Billing details and feedback) in search bar >> click on the object.
2. Now click on “Fields & Relationships” >> New.
3. Select “Look-up relationship” as data type and click Next.
4. Select the related object “ Service records” and click next.
5. Next >> Next >> Save & new.

Creation of Checkbox Fields

Creation of Checkbox Field on Appointment Object :

1. Go to setup >> click on Object Manager >> type object name(Appointment) in search bar >> click on the object.
2. Now click on “Fields & Relationships” >> New.
3. Select “Check box” as data type and click Next.

Specify the type of information that the custom field will contain.

Data Type

☐ None Selected Select one of the data types below

☐ Auto Number A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

☐ Formula A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

☐ Roll Up Summary [\[i\]](#) A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

☐ Lookup Relationship Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

☐ Master Detail Relationship Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records.
- The ownership and sharing of a detail record are determined by the master record.
- When a user deletes the master record, all detail records are deleted.
- You can create rollup summary fields on the master record to summarize the detail records.

The relationship field allows users to click on a lookup icon to select a value from a popup list. The master object is the source of the values in the list.

☐ External Lookup Relationship Creates a relationship that links this object to an external object whose data is stored outside the Salesforce org.

☒ **Checkbox** Allows users to select a True (checked) or False (unchecked) value.

☐ Currency Allows users to enter a dollar or other currency amount and automatically formats the field as a currency amount. This can be useful if you export data to Excel or another

Creating Manager Role

Creating Manager Role:

1. Go to quick find >> Search for Roles >> click on set up roles.

2. Click on Expand All and click on add role under whom this role works.

3. Give Label as “Manger” and Role name gets auto populated. Then click on Save.

Role Edit

Label Manger

Role Name Manger

This role reports to CEO

Role Name as displayed on reports

Save Save & New Cancel

Creating another roles

Creating another two roles under manager

1. Go to quick find >> Search for Roles >> click on set up roles.

2. Click plus on CEO role, and click add role under manager.

[Collapse All](#) [Expand All](#)

3. Give Label as “sales person” and Role name gets auto populated. Then click on Save.

Create User

1. Go to setup >> type users in quick find box >> select users >> click New user.
2. Fill in the fields
 1. First Name : Niklaus
 2. Last Name : Mikaelson
 3. Alias : Give a Alias Name
 4. Email id : Give your Personal Email id
 5. Username : Username should be in this form: text@text.text
 6. Nick Name : Give a Nickname
 7. Role : Manager
 8. User licence : Salesforce
 9. Profiles : Manager

3. Save.

creating another users

1. Repeat the steps and create another user using
 - a. Role : sales person
 - b. User licence : Salesforce Platform
 - c. Profile : sales person

Note : create atleast 3 users with these permissions.

Creating New Public Group

1. Go to setup >> type users in quick find box >> select public groups >> click New.

2. Give the Label as “sales team”.
3. Group name is autopopulated.
4. Search for Roles.
5. In Available Members select Sales person and click on add it will be moved to selected member.
6. Click on save.

Creating Sharing settings

1. Go to setup >> type users in quick find box >> select Sharing Settings >> click Edit.
2. Change the OWD setting of the Service records Object to private as shown in fig.

3. Click on save and refresh.
4. Scroll down a bit, Click new on Service records sharing Rules.
- 5.

6. Give the Label name as “Sharing setting”
7. Rule name is auto populated.

8. In step 3 : Select which records to be shared, members of “ Roles ” >> “ Sales person”
9. In step 4: share with, select “ Roles ” >> “ Manager ”
10. In step 5 : Change the access level to “ Read / write ”.
11. Click on save.

Sharing Settings

You can use sharing rules only to grant wider access to data, not to restrict access.

Step 1: Rule Name

Label: sharing settings
 Rule Name: sharing_settings
 Description:

Step 2: Select your rule type

Rule Type: ☒ Based on record owner ☐ Based on criteria

Step 3: Select which records to be shared

Service records: owned by members of Roles Sales person

Step 4: Select the users to share with

Share with: Roles Manager

Step 5: Select the level of access for the users

Access Level: Read/Write

Save Cancel

Create a Flow

New Flow

Core All + Templates

Screen Flow Guides users through a business process that's launched from Lightning pages, Experience Cloud sites, quick actions, and more.	Record-Triggered Flow Launches when a record is created, updated, or deleted. This autolaunched flow runs in the background.
Schedule-Triggered Flow Launches at a specified time and frequency for each record in a batch. This autolaunched flow runs in the background.	Platform Event—Triggered Flow Launches when a platform event message is received. This autolaunched flow runs in the background.
Autolaunched Flow (No Trigger) Launches when invoked by Apex, processes, REST API, and more. This autolaunched flow runs in the background.	Record-Triggered Orchestration Launches when a record is created or updated. An orchestration lets you create a multi-step, multi-user process.

2 Create

3. Select the Object as “Billing details and feedback” in the Drop down list.
4. Select the Trigger Flow when: “A record is Created or Updated”.
5. Select the Optimize the flow for: “Actions and Related Records” and Click on Done.

Configure Start

Select Object
Select the object whose records trigger the flow when they're created, updated, or deleted.

*Object
Billing details and feedback

Configure Trigger
*Trigger the Flow When:

☐ A record is created
☐ A record is updated
☒ A record is created or updated
☐ A record is deleted

Set Entry Conditions
Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.

Condition Requirements
None

*Optimize the Flow for:

Fast Field Updates Update fields on the record that triggers the flow to run. This high-performance flow runs <i>before</i> the record is saved to the database.	Actions and Related Records Update <i>any</i> record and perform actions, like send an email. This more flexible flow runs <i>after</i> the record is saved to the database.
--	--

☐ Include a Run Asynchronously path to access an external system after the original transaction for the triggering record is successfully committed

4 Cancel Done

6. Under the Record-triggered Flow Click on “+” Symbol and In the Drop down List select the “Update records Element”.

7. Give the Label Name : Amount Update
8. Api name : is auto populated

Edit Update Records

Update Salesforce records using values from the flow.

***Label**
Amount Update

***API Name**
Amount_Update

Description

***How to Find Records to Update and Set Their Values**

- ☒ Use the billing details and feedback record that triggered the flow
- ☐ Update records related to the billing details and feedback record that triggered the flow
- ☐ Use the IDs and all field values from a record or record collection
- ☐ Specify conditions to identify records, and set fields individually

Set Filter Conditions

Condition Requirements to Update Record
All Conditions Are Met (AND)

Set Filter Conditions

Condition Requirements to Update Record
All Conditions Are Met (AND)

Field	Operator	Value	
Payment_Status__c	Equals	Completed	X

Set Field Values for the Billing details and feedback Record

Field	Value	
Payment_Paid__c	← \$Record > Service records > Appointment > Service A... X X	X

9. Set a filter condition : All Conditions are met(AND)
10. Field : Payment_Status__c
11. Operator : Equals
12. Value : Completed
13. And Set Field Values for the Billing details and feedback Record
14. Field : Payment_Paid__c
15. Value : {!\$Record.Service_records__r.Appointment__r.Service_Amount__c}
16. Click On Done.

17. Before creating another Element. Create a New Resource form Toolbox form top left.

18. Click on the New Resource, And select Variable.

19. Select the resource type as text template.

20. Enter the API name as “ alert”.

21. Change the view as Rich Text ? View to Plain Text.

22. In body field paste the syntax that given below.

Dear {!\$Record.Service_records__r.Appointment__r.Customer_Name__r.Name},

I hope this message finds you well. I wanted to take a moment to express my sincere gratitude for your recent payment for the services provided by our garage management team. Your prompt payment is greatly appreciated, and it helps us continue to provide top-notch services to you and all our valued customers.

Amount paid : {!\$Record.Payment_Paid__c}

Thank you for Coming .

23. Click done.

The screenshot shows the 'Edit Text Template' interface. The 'API Name' field is highlighted with a red box and contains the text 'alert'. The 'Body' field contains the text 'Dear {!\$Record.Service_records__r.Appointment__r.Customer_Name__r.Name},'. A red arrow points to the 'View as Plain Text' dropdown menu, which is also highlighted with a red box. Another red arrow points to the 'Done' button at the bottom right.

24. Now Click on Add Element , select Action.

25. Their action bar will be opened in that search for “ send email ” and click on it.

26. Give the label name as “ Email Alert”

27. API name will be auto populated.

28. Enable the body in set input values for the selected action.

29. Select the text template that created , Body : {!alert}

30. Include recipient address list select the email form the record.

31. RecipientAddressList:
{!\$Record.Service_records__r.Appointment__r.Customer_Name__r.Gmail__c}
32. Include subject as “Thank You for Your Payment - Garage Management”.
33. Click done.

Edit Action

Use values from earlier in the flow to set the inputs for the “Send Email” core action. To use its outputs later in the flow, store them in variables.

*Label	*API Name
Email Alert	Email_Alert

Description

Set Input Values for the Selected Action

A _a Body ⓘ	{!alert}	☒ Include
A _a Email Template ID		☐ Don't Include
Log Email on Send		☐ Don't Include

Edit Action

A _a Recipient Address List ⓘ	{!\$Record.Service_records__r.Appointment__r.Cus	☒ Include
A _a Recipient ID		☐ Don't Include
A _a Related Record ID		☐ Don't Include
Rich-Text-Formatted Body		☐ Don't Include
A _a Sender Email Address		☐ Don't Include
A _a Sender Type		☐ Don't Include
A _a Subject ⓘ	Thank You for Your Payment - Garage Manageme	☒ Include

34. Click on save. Give the Flow label , Flow Api name will be autopopulated.
35. And click save, and click on activate.

The screenshot shows a 'Save as' dialog box for a 'Record-Triggered Flow'. At the top, there are two buttons: 'A New Version' (green) and 'A New Flow' (light green). Below these, there are two input fields: '*Flow Label' with the text 'Billing Amount Flow' and '*Flow API Name' with the text 'Billing_Amount_Flow'. There is also a 'Description' text area. At the bottom right, there are 'Cancel' and 'Save' buttons. A 'Show Advanced' link is visible on the left side.

Create another Flow

1. Go to setup ? type Flow in quick find box ? Click on the Flow and Select the New Flow.

2. Select the Record-triggered flow and Click on Create.

3. Select the Object as “**Service records**” in the Drop down list.
4. Select the Trigger Flow when: “A record is Created or Updated”.
5. Select the Optimise the flow for: “Actions and Related Records” and Click on Done.
6. Under the Record-triggered Flow Click on “+” Symbol and In the Drop down List select the “Update records Element”.
7. Set a filter condition : All Conditions are met(AND)
8. Field : **Quality_Check_Status__c**
9. Operator : **Equals**
10. Value : **True**
11. And Set Field Values for the Billing details and feedback Record
12. Field : **Service_Status__c**

13. Value : **Completed**

The screenshot displays two sections of the Salesforce Flow Builder interface. The top section, titled "Set Filter Conditions", includes a dropdown for "Condition Requirements to Update Record" set to "All Conditions Are Met (AND)". Below this, there are three input fields: "Field" with the value "Quality_Check_Status__c", "Operator" with the value "Equals", and "Value" with the value "True". A "+ Add Condition" button is located below these fields. The bottom section, titled "Set Field Values for the Service record Record", shows a "Field" input with "Service_Status__c" and a "Value" input with "Completed". An arrow points from the "Value" field to the "Field" field. A "+ Add Field" button is located below these fields.

14. Click On **Done**.
15. Click on **save**
16. Given the Flow label as **Update Service Status** , Flow Api name will be auto populated.
17. And click save, and click on **activate**.

Apex handler

UseCase : This use case works for Amount Distribution for each Service the customer selected for there Vehicle.

1. Login to the respective trailhead account and navigate to the gear icon in the top right corner.
2. Click on the Developer console. Now you will see a new console window.
3. In the toolbar, you can see FILE. Click on it and navigate to new and create New apex class.
4. Name the class as "AmountDistributionHandler".

```
AmountDistribution.apxt | AmountDistributionHandler.apxc *
Code Coverage: None | API Version: 58 | Go To

1 public class AmountDistributionHandler {
2
3     public static void amountDist(list<Appointment__c> listApp){
4         list<Service_records__c> serList = new list <Service_records__c>();
5
6         for(Appointment__c app : listApp){
7             if(app.Maintenance_service__c == true && app.Repairs__c == true && app.Replacement_Parts__c == true){
8                 app.Service_Amount__c = 10000;
9             }
10            else if(app.Maintenance_service__c == true && app.Repairs__c == true){
11                app.Service_Amount__c = 5000;
12            }
13            else if(app.Maintenance_service__c == true && app.Replacement_Parts__c == true){
14                app.Service_Amount__c = 8000;
15            }
16            else if(app.Repairs__c == true && app.Replacement_Parts__c == true){
17                app.Service_Amount__c = 7000;
18            }
19            else if(app.Maintenance_service__c == true){
20                app.Service_Amount__c = 2000;
21            }
22            else if(app.Repairs__c == true){
23                app.Service_Amount__c = 3000;
24            }
25            else if(app.Replacement_Parts__c == true){
26                app.Service_Amount__c = 5000;
27            }
28        }
29    }
30 }
31 }
```

Code:

```
public class AmountDistributionHandler {
```

```
    public static void amountDist(list<Appointment__c> listApp){
```

```
        list<Service_records__c> serList = new list <Service_records__c>();
```

```
for(Appointment__c app : listApp){  
    if(app.Maintenance_service__c == true && app.Repairs__c == true &&  
app.Replacement_Parts__c == true){  
        app.Service_Amount__c = 10000;  
    }  
    else if(app.Maintenance_service__c == true && app.Repairs__c == true){  
        app.Service_Amount__c = 5000;  
    }  
    else if(app.Maintenance_service__c == true && app.Replacement_Parts__c == true){  
        app.Service_Amount__c = 8000;  
    }  
    else if(app.Repairs__c == true && app.Replacement_Parts__c == true){  
        app.Service_Amount__c = 7000;  
    }  
    else if(app.Maintenance_service__c == true){  
        app.Service_Amount__c = 2000;  
    }  
    else if(app.Repairs__c == true){  
        app.Service_Amount__c = 3000;  
    }  
    else if(app.Replacement_Parts__c == true){  
        app.Service_Amount__c = 5000;  
    }  
  
}  
}
```

}

Trigger Handler :

How to create a new trigger :

1. While still in the trailhead account, navigate to the gear icon in the top right corner.
2. Click on developer console and you will be navigated to a new console window.
3. Click on File menu in the tool bar, and click on new? Trigger.
4. Enter the trigger name and the object to be triggered.
5. Name : AmountDistribution
6. sObject : Appointment__c

Syntax For creating trigger :

The syntax for creating trigger is :

Trigger [trigger name] on [object name](Before/After event)

```
{  
}
```

In this project , trigger is called whenever the particular records sum exceed the threshold i.e minimum business requirement value. Then the code in the trigger will get executed.

1. Handler for the Appointment Object

Code:

```
trigger AmountDistribution on Appointment__c (before insert, before update) {
```

```
    if(trigger.isbefore && trigger.isinsert || trigger.isupdate){
```

```
        AmountDistributionHandler.amountDist(trigger.new);
```

```
    }
```

}

create a report folder

1. Click on the app launcher and search for reports.
2. Click on the report tab, click on new folder.

3. Give the Folder label as “Garage Management Folder”, Folder unique name will be auto populated.
4. Click save.

Sharing a report folder

1. Go to the app >> click on the reports tab.
2. Click on the All folder , click on the Drop down arrow for Garage Management folder, and Click on share.

3. Select the share with as “roles”, in name field search for “manager”, give “view” as access for that role.
4. Then click share, and click on Done.

The screenshot shows the 'Share folder' dialog box. At the top, it says 'Share folder'. Below that, a note states: 'These sharing settings apply to all subfolders in this folder.' The 'Share With' section has a dropdown menu set to 'Roles' (labeled 1). Below this is a search bar labeled 'Names' with the placeholder 'Search Roles...' (labeled 2). A search result 'Manger' with a close button is visible in the list. To the right of the search bar is an 'Access' dropdown menu set to 'View' (labeled 3). Below the search bar is a 'Share' button (labeled 4). At the bottom of the dialog, there is a section titled 'Who Can Access' with a search bar. Below this, a user 'sunny 1' is listed with a 'Manage' dropdown and a close button. At the very bottom right, there is a 'Done' button (labeled 5).

Create Report Type

1. Go to setup >> type users in quick find box >> select Report Type >> click on Continue.
2. Click on new custom report type.

3. Select the Primary object as “ Customer details” .
4. Give the Report type Label as “ Service information ”
5. Report type Name is autopopulated.
6. Keep the Description as same.
7. Select Store in Category as “ other Reports ”
8. Select the deployment status as “ Depolyed ”, click on Next.

The screenshot shows the 'Report Type Focus' section of the Salesforce Setup interface. The form includes the following fields and options:

- Primary Object:** A dropdown menu with 'Customer Details' selected. A green arrow points to it.
- Identification Section:**
 - Report Type Label:** A text input field containing 'Service information'. A green arrow points to it.
 - Report Type Name:** A dropdown menu with 'Service_information' selected.
 - Description:** A text input field containing 'Service information'. A green arrow points to it.
 - Store in Category:** A dropdown menu with 'Other Reports' selected. A green arrow points to it.
- Deployment Section:**
 - Deployment Status:** Two radio buttons: 'In Development' and 'Deployed'. The 'Deployed' radio button is selected. A green arrow points to it.

At the bottom right of the form, there are 'Next' and 'Cancel' buttons. A green arrow points to the 'Next' button.

9. now , Click on Related object box.
10. Click on Select Object, choose Appointment Object as shown in fig.

New Custom Report Type

6. Follow the same steps, from Reports Milestone and Activity 2, and provide the sharing settings for the folder that was just created.

Create Dashboard

1. Go to the app >> click on the Dashboards tabs.
2. Give a Name and select the folder that created, and click on create.

A form titled "New Dashboard". It has a "Name" field with a red asterisk, containing the text "Customer review", which is highlighted with a green box. Below it is a "Description" field. Then is a "Folder" field containing the text "Service Rating", also highlighted with a green box. To the right of the "Folder" field is a "Select Folder" button. At the bottom right, there are "Cancel" and "Create" buttons.

3. Select add component.

4. Select a Report and click on select.

5. Select the Line Chart. Change the theme.
6. Click Add then click on Save and then click on Done.
7. Preview is shown below.

8. After that Click on Subscribe on top right.
9. Set the Frequency as “ weekly ”.
10. Set a day as monday.
11. And Click on save.

creating records

To create a record in the follow objects follow these steps

1. Click on the app launcher located at the left side of the screen.
2. Search for “**Garage Management**” and click on it.
3. Click on the “**Consumer details** tab”.
4. Click on new and fill the details as shown below figs, and click save.

New Customer Detail

* = Required Information

Information

* Customer Name ↶

Phone number ↶

Gmail ↶

Owner
 Annapurna SmartBridge

Now, Create the Appointment Record

1. Click on the “**Appointment** tab”.
2. Enter the customer details as created, while entering Appointment Date enter the date less than the created date.
3. Match the validation while entering the vehicle number plate.
4. Select the services you need.
5. Click on save to see the Service Amount.

The screenshot shows the 'Appointment' form in the Garage Management System. The form is titled 'Appointment app-016'. It includes a navigation bar at the top with tabs: 'Garage Manageme...', 'Customer Details', 'Appointments' (selected), 'Service records', 'Billing details and feedback', 'Reports', and 'Dashboards'. The form fields are as follows:

- Appointment Name:** app-016
- Owner:** Annapurna SmartBridge
- Customer Details:** Mac
- *Appointment Date:** 13/11/2024
- Maintenance service:** ☒
- Repairs:** ☒
- Replacement Parts:** ☐
- Service Amount:** (empty field)
- *Vehicle number plate:** TS30EU0443

At the bottom, there is a 'Created By' field showing 'Annapurna SmartBridge, 18/11/2024, 3:28 pm' and a 'Last Modified By' field showing 'Annapurna SmartBridge, 18/11/2024, 3:28 pm'. There are 'Cancel' and 'Save' buttons at the bottom right.

Now, Create a service Record

1. Click on the “**Service record** tab”.
2. Enter the Appointment, and started is selected as default.
3. Click on save.
